使用手機安全須知

暴露至射頻能量

暴露於無線電波和比吸收(SAR)的訊息

此G7200型號手機設計符合有關無線電波輻射的要求。這要求是基於科學的研究後制定的，並且已包含了一定的安全寬容度，以確保不同年齡和健康狀況的人群的安全。

- 行動電話的輻射標準採用的計算單位被稱爲「比吸收率」(“Specific Absorption Rate” or “SAR”)。在測量比吸收收率(SAR)，均採用標準測量方式，測量手機在不同波段中以最高認可發射功率操作時的比吸收率(SAR)。
- 也許不同型號LG手機的比吸收率(SAR)可能有所差異，但它們都符合暴露於無線電波的相關國際標準。
- 根據國際非電離輻射防護委員會(INCRP)所發展的標準，適用於公眾的無線電話比吸收率(SAR)限制是平均每10克組織2.0瓦特/千克(W/kg)，而SAR在台灣的限制標準爲1.6瓦特/公斤。
- LG G7200 經政府認可的實驗室測試後，此型號的最高比吸收率(SAR)值爲 0.816 瓦特/公斤。
- 減少電池波影響，請妥善使用手機!

Java is a technology developed by Sun Microsystems.
Similar to the way you would download the Java Applet using the standard Netscape or MS Internet Explorer browsers, Java MIDlet can be downloaded using the WAP enabled phone.
Depending on the service provider, all Java based programs such as Java games can be downloaded and run on a phone.
Once downloaded, the Java program can be viewed within the Applications menu where you can select, execute, or delete. The Java program files saved in the phone are in .JAD and .JAR formats.

Note The JAR file is a compressed format of the Java program and the JAD file is a description file that includes all detailed information. From the network, prior to download, you can view all detailed file descriptions from the JAD file.

Warning Only J2ME (Java 2 Micro Edition) based programs will run in a phone environment.
The J2SE (Java 2 Standard Edition) based programs will only run in a PC environment.

Applications Menu 7-1

Application menu displays the list of Java programs downloaded using the WAP. All previous downloaded programs can be selected, deleted, or viewed in detail within the Application menu. From the list within the Application menu, the following options are available:

▶ **Open:** Open the selected program. The list includes all Java programs installed in the phone.

▶ **Delete:** Delete the selected program. Once deleted, you will not be able to restore the program unless it is downloaded again using the WAP.

▶ **Details:** Displays detailed information on the selected program. This includes the program name, program size, program version, vendor information and the website address or the URL.

▶ **Connect options:** Some Java applications may require a data connection to be made. Select one of the following options.

- **Ask first:** You will be asked before the application makes the connection.

- **Allowed:** The connection is created immediately without a notification.
- **Not allowed:** No connection is allowed.

Download Menu 7-2

When a new Java program is downloaded using the WAP, the address from which a download takes place is known as a bookmark. The Java menu includes a bookmark list for downloading Java programs and this bookmark list can be viewed from the Download menu. You can connect, view, edit, delete, and add new bookmarks.

▶ **Connect:** Selected address in the bookmark is used for data connection. After successful connection, desired Java program can be downloaded from the list.

▶ **View:** Detailed information on a bookmark can be viewed such as the address of bookmark and title of bookmark required for connecting to certain sites.

▶ **Edit:** Selected bookmark can be edited. Editing a bookmark is done in the order of Address → Title. When creating a new bookmark, same order is followed.

▶ **Delete:** Selected bookmark is deleted. All bookmarks can be deleted completely from the bookmark list screen. Deleted bookmark cannot be restored so caution is required when deleting bookmarks.

▶ **Add new:** New bookmark is added. The same order used during Edit bookmark applies to Add new bookmark. Select the Add new option from the bookmark menu or when no bookmark exists, then the Add new can be selected from the bookmark list screen.

Note After selecting the Connect function to access the Java MIDlet Provider's server, you may choose one of many Java programs to download and install into your phone. Once connected to the server, the Go button can be pressed to view the JAD information on a desired program. The Get button will begin the download and install process. The download and install process will take place simultaneously and once download is complete you can immediately run the Java program. The installed Java program can be selected to run at a later time from the Application menu.

Memory Status Menu 7-3

The downloaded programs using the WAP are stored in the phone memory. There is a maximum memory capacity in a phone and once you exceed this memory, you will not be able to store any more programs. The View Information menu allows you to check the available memory capacity in a phone.

Voice dial (Menu 9-2-6)

You can make a phone call by speaking a voice tag that has been added to a contact card. Any spoken word(s) can be a voice tag. Before using voice-activated dialling, note that:

- Voice tags are not language dependent. They are dependent on the speaker’s voice.
- Voice tags are sensitive to background noise. Record them and make calls in a quiet environment.

- When recording a voice tag or making a call by saying a voice tag, the loudspeaker is in use. Hold the phone at a short distance away from your mouth and face so that the proximity sensor does not turn the loudspeaker off.
- Very short names are not accepted. Use long enough names and avoid similar names for different numbers.

▶ **Automatic:** Use this to enter voice-activated dialling mode whenever you open the folder.

▶ **Manual:** Use this to enter voice-activated dialling mode by holding the star[*/voice] key.

Note You must say the name exactly as you said when you recorded it. This may be difficult, for example, in a noisy environment or during an emergency, so you should not rely solely upon voice-activated dialling in all circumstances.

Select **On**, and your phone will make a maximum of five attempts to connect the call after an unsuccessful call attempt.
